SAFETY PRECAUTIONS

Keep out of reach of children.

Keep away from food, drink and animal feedingstuffs.

When using do not eat drink or smoke.

To avoid risks to man and the environment, comply with the instructions for use.

KEEP IN ORIGINAL CONTAINER, tightly closed, in a safe place.

WASH OUT CONTAINER THOROUGHLY, and dispose of safely

*DO NOT RE-USE CONTAINER for any other purpose

DIRECTIONS FOR USE

GENERAL INFORMATION

QUALIBRA is a wetting and water conservation agent that has been developed to help in the management of water in turfgrass root zones, and to help prevent dry patch (localised dry spot).

QUALIBRA comprises a dynamic penetrant and a powerful polymer. The penetrant component drives more efficient water movement and distribution within the root zone; while the polymer component holds moisture deeply and evenly within the root zone. It is designed for use on all areas of golf courses, sports fields and other amenity turf areas.

QUALIBRA is well tolerated by all major turf species and allows more uniform distribution of moisture throughout the root zone. Following application water conservation effects occur throughout the root zone and not just on the surface or thatch layers. For optimum turf quality QUALIBRA should be used in conjunction with turf management practices that promote good turf health.

RESTRICTIONS

Prevent spray drift onto surrounding areas. Do not apply when ground is frozen.

CROP SPECIFIC INFORMATION

Apply as a preventative programme to prevent the development of dry patch (localised dry spot)

Rates of Use

Apply at a rate of 20 l/ha in a water volume of 400-1000 litres per hectare.

Timing

Apply QUALIBRA at approximately monthly intervals in a preventative programme to prevent the development of localised dry spot and aid water management.

QUALIBRA would typically be applied from early spring to autumn, but can be applied throughout the year if required.

MIXING AND SPRAYING

Make sure the sprayer is clean and set to give an even application at the correct volume and an even deposit. Half fill the spray tank with clean water and commence agitation. Add the required quantity of QUALIBRA to the spray tank. Complete filling to the required volume and continue to agitate throughout the spraying operation.

Do not leave the spray liquid in the sprayer for long periods (such as during meal breaks or overnight). Make up only the amount of spray required for immediate use.

Thoroughly wash all spray equipment with water immediately after use.

Good Field Practice

As part of our Product Stewardship policy, Syngenta Crop Protection recommends the following precautions should also be observed:

- Wear appropriate clothing - coveralls and protective gloves, when handling the concentrate.
